

ONE PLATFORM... MULTIPLE DESIGNS

"The automobile industry often develops new innovative technologies that are integrated into a long list of different products and models. We also see Motio and Moveo as examples of innovative products that are built around unique technological platforms. Both the table and the chair have a number of revolutionary functions and design features, which we have developed with optimal functionality, comfort and handling in mind."

Together, the Moveo table and the Motio chair form the More Collection – a collection of furniture for conference, meeting and training facilities, which encourage organizations to develop a dynamic corporate culture. Moveo is a handsome, new generation “flip-top” table system, with a choice of “T” or “C” legs. Not only is this sturdy and elegant table easily operated and handled by just one person, it is also very space-saving. Moveo also features an excellent solution for the provision of power and data in the tabletop. Motio is a versatile chair programme. All models are based on the same design platform. This guarantees a coherent, elegant look throughout any company. The seat and back is equipped with an innovative mini synchro-mechanism, which ensures a high degree of comfort. Finally: Each model is stackable – even with a 5-star frame! The More Collection won gold in the “Best of NeoCon” competition in Chicago in June 2005.

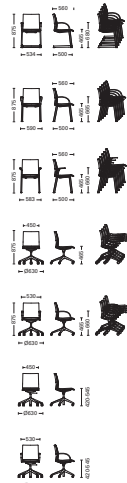

MOTIO

HOWE

Even the 5-star Conference chair is stackable, thereby combining excellent comfort and flexibility.

Flip the tabletop and nest table within table. Each nested table takes 14 cm space in depth.
