Frame leg with cover

The versatile meeting table system In-tensive is offering solutions for different conference needs now with a new, distinguished leg design. The frame leg is available chromed or epoxycoated, with or without covers. Highly modern composition would be for example to use colourful semi-transparent acrylic sheets for covers, even equipped with led lights. Naturally, the frame leg can also be covered with the same material as the table top. All In-tensive modular meeting tables have a spacious cable tray for easy cable management and different connections. For total range see separate brochure.
