

Corals ^{1/5}

Modularity reaches a new dimension with Palau's seating system CORALS by Robert Bronwasser.

CORALS is a very dynamic system indeed, adding to the continuously changing needs of the business market. All elements within the program, such as seating elements, walls, tables or armrests, are simply connected onto an aluminum frame which functions as the base for this seating system. Due to the user friendly fixing system all elements can be plugged in and out effortlessly and enables cables to be stored neatly out of sight. This way different combinations are easy to expand, transport, install and (re-)assemble.

CORALS is very suitable for daring colour schemes.
